Dear Alpaca hiring team,

I am applying for the Project Manager role.

I am a growth marketer at Blockchain.com, working across Retail, Wealth and Institutional in 26 markets. My strength has always been problem solving, and I use AI to solve marketing problems, whether improving current workflows or opening new acquisition funnels.

On running launches, I led the launch of our loans product in Malaysia on my own initiative. I researched the local crypto regulations, worked with Legal on tone and risk disclosures, and helped set up a new compliance review process for Malaysia as a new market. I then coordinated KOL, affiliate and referral partners for the launch. We converted 4 high net worth clients within the first month. Guiding a partner from scoping to launch, through KYC, AML and regulatory disclosures, is the work I want to do at Alpaca.

On being the voice of the customer, users were dropping off our perps product and I wanted to understand why. I led research with active, inactive and churned users and found that many did not understand how perps work or what the risks are. I took the findings to Product, and we made the in-app explainer persistent and reworked the help page. Retention grew by 12%, and over the same two months cumulative trading volume grew from $100m to $500m. At Alpaca, I would bring partner feedback to the technical teams in the same way, with the evidence behind each request so it can be prioritised.

On APIs and AI, I build tools myself. I built automated reporting with Claude Code and MCP connectors, then worked with Data Engineering and Security to ship it to production as a company-wide dashboard. It saves the team about 10 hours a month. I also built API tools that localise our Iterable CRM emails into 24 languages, which lifted open rates by 10%. I am comfortable working hands-on with APIs, and I would like to become an expert on Alpaca's API so I can help partners solve problems quickly.

On training and handover, I built our first in-house AI UGC workflow in 2 weeks. It cut production time by 75%, lifted click-through rate from 0.4% to 1.15%, cut cost per install from $25 to $6, and drove 600+ installs in the first 7 days after I recreated the creative for our rebranded yield product. What I learnt is that a project that cannot be replicated at scale is not a good project. The first version relied on me to write the prompts, so I built a skill that generates them and handed the workflow to other team members to run. Building resources that let others repeat the work is how I would help Alpaca scale future partner integrations.

I want to join Alpaca because you sit behind other companies' investing apps in 40 countries, so every launch brings a different regulator, a different customer base and a different timeline. Each country has its own compliance restrictions, and investors behave very differently from one market to the next. At Blockchain.com, we noticed that our users in Africa tend to take on more risk, while users in the UK are more balanced. I like work where one size does not fit all. I also noticed that you describe Alpaca as agent-first brokerage infrastructure, so I expect AI to be encouraged in everyday work. That suits me. I am Malaysian, I speak English, Mandarin, Cantonese and Malay, and I am happy to work with partners across time zones.

I can share references from product marketing, compliance and legal colleagues at Blockchain.com.

Kind regards,

Jessie Chan
