Dear Capital on Tap hiring team,

I am applying for the AI enablement role.

I am a growth marketer at Blockchain.com, and most of my work is building AI tools that my team uses every day. I build them myself with Claude Code, Cursor, MCP connectors and APIs, and I own most of the AI tools in our marketing team. My strength is solving problems with AI tools, and building long-term solutions that anyone can take over.

On building for a team, our team spent 30 minutes a day on manual reporting. I built automated reporting with Claude Code and MCP connectors, and shipped it to production as a company-wide dashboard with Data Engineering and Security. It saves the team about 10 hours a month. I also built API tools that translate our CRM communications in Iterable into 24 languages, which lifted email open rates by 10%.

On understanding the problem first, users were churning from our perps product. Before proposing anything, I led research with active, inactive and churned users to find out why. Many did not understand the product. I worked with Product to make the explainer persistent and rework the help page, and retention grew by 12%.

On shipping fast, creator content was expensive and ran out quickly. I built our first in-house AI UGC workflow in 2 weeks. It cut production time by 75%, lifted click-through rate from 0.4% to 1.15%, and cut cost per install from $25 to $6. When we relaunched our yield product, the videos from this workflow drove 600+ installs in the first 7 days.

I want to join Capital on Tap because at your size, with over 1,000 people, AI can save a huge amount of time across every team. I have seen what it does at a smaller scale. I built automated reporting that saves my team about 10 hours a month, API tools that localise our CRM communications into 24 languages, and an AI UGC workflow that cut production time by 75%. I am excited to join a company that is hiring for AI roles to improve how its teams operate, rather than just talking about AI.

I can share references from product marketing, compliance and legal colleagues at Blockchain.com.

Kind regards,

Jessie Chan
