Dear Primer hiring team,

I am applying for the Product Marketing Manager role in your partner team.

I am a product marketer at Blockchain.com, working across Retail, Wealth and Institutional in 26 markets, with a background in paid media. I use AI to solve marketing problems, whether improving current workflows or opening new acquisition funnels.

I turn customer research into messaging that technical users understand, which is what your partner and merchant persona journeys need. Users were dropping off our perps product, and I set out to find out why. I led research with active, inactive and churned users and found that many did not understand how perps work or what the risks are. I took the findings to Product, and together we made the product and risk explainer always visible and reworked the help page. Retention grew by 12%, and cumulative trading volume grew from $100m to $500m over the same two months. I also adapt messaging by market, tailoring content to how users behave in each region and localising our Iterable CRM messages into 24 languages, which lifted open rates by 10%.

I use AI to produce content at scale, which is how I would deliver partner campaigns and enablement material across channels without starting from a new template each time. When we rebranded our yield product, every creator video still carried the old name, and the relaunch needed new assets quickly. I built our first in-house AI UGC workflow in 2 weeks, recreated the product messaging under the new brand, then built a skill that writes the prompts and handed the workflow to the team. The relaunch drove 600+ installs in the first 7 days, and the workflow cut production time by 75% and lifted click-through rate from 0.4% to 1.15%. I also built automated reporting with Claude Code and MCP connectors, now a company-wide dashboard that saves the team about 10 hours a month.

My background in paid media means I can test messaging with real buyers and report on adoption, engagement and activation, so we always know what to scale. Our Apple Search Ads ran in only 2 countries, and the goal was to scale them without raising costs. I expanded to 26 countries, ran 128 structured tests, scaled the 5 campaign groups that worked and cut the 26 that did not. Daily installs grew about 4x, from 200+ to 800+, while cost per install stayed flat. On the B2B side, I also worked with our Senior B2B Product Marketing Manager to build a database of 100 operators that gave business development 20+ active leads.

I want to join Primer because you solve a pain point that people often miss, the work of connecting to every payment provider. I see the same trend in AI. MCP connectors have made it simple to plug different vendors into an LLM through one standard, instead of building a separate integration for each one. I used MCP connectors to build our reporting dashboard, so I know how much that simplicity matters. Primer is doing the equivalent for payments. Merchants connect once, and can then route payments across dozens of providers and fraud tools. Most people only see the providers, not the work it takes to connect and maintain each of them. That is the story I would like to tell your partners and merchants.

I can share references from product marketing, compliance and legal colleagues at Blockchain.com.

Kind regards,

Jessie Chan
