Dear Primer hiring team,

I am applying for the Product Marketing Manager role in your partner team.

I am a product marketer at Blockchain.com, working across Retail, Wealth and Institutional in 26 markets. I work on how our products are positioned, launched and adopted, and my background in paid media is my edge. I test every message with real users before we scale it, so I know which positioning works for a new or current product. I use AI to solve marketing problems, whether improving current workflows or opening new acquisition funnels.

On launching a product, I led the launch of our loans product in Malaysia on my own initiative. I researched the local regulations and competitors, set the positioning, brand and tone for a high net worth audience, and worked with Legal to set up a new compliance review process for the market. I then chose the partners to take it to market, across KOL, affiliate and referral channels. We converted 4 high net worth clients within the first month. Launching a partner feature is the same work, deciding who it is for, what the message is, and which partners can carry it.

On customer insight, users were dropping off our perps product and I wanted to understand why. I led research with active, inactive and churned users and found that many did not understand how perps work or what the risks are. I took the findings to Product, and we made the product and risk explainer always visible and reworked the help page. Retention grew by 12%. With a technical product, the message only works when users can see exactly what it does for them. Your partners and merchants are technical buyers, and I would build their persona journeys from research in the same way.

On relaunching a product with AI, when we rebranded our yield product, every creator video still carried the old name. I used the AI UGC workflow I had built in 2 weeks to recreate the product messaging under the new brand, and the relaunch drove 600+ installs in the first 7 days. The workflow cut production time by 75% and lifted click-through rate from 0.4% to 1.15%. A project that cannot be replicated at scale is not a good project, so I built a skill that writes the prompts and handed the workflow to the team. At Primer, I would use AI the same way, to produce partner campaigns and enablement material across channels without starting from a new template each time.

On adapting the message, users in Africa tend to take on more risk, while users in the UK are more balanced, so we tailored content by region. I also built API tools that localise our Iterable CRM messages into 24 languages, which lifted open rates by 10%. On the B2B side, I worked with our Senior B2B Product Marketing Manager and built a database of 100 operators that gave business development 20+ active leads.

On proving what works, this is where paid media helps me as a product marketer. I scaled our Apple Search Ads from 2 to 26 countries, and daily installs grew about 4x while cost per install stayed flat, by running 128 structured tests. That habit means I can test partner messaging early, and report on adoption, engagement and activation so we always know what to scale.

I want to join Primer because you are building the partner marketing engine from scratch, with no established process to lean on. I like that. I think you only really know why something is working, or why it is not, when you are involved in the whole process, from the positioning to the launch to the report. I have built things from zero before, from the Malaysia launch to our AI workflow, and I would like to do it again in payments, where a better product reaches merchants through the partners they already trust.

I can share references from product marketing, compliance and legal colleagues at Blockchain.com.

Kind regards,

Jessie Chan
