Dear Alpaca hiring team,

I am applying for the Operations role.

I am a growth marketer at Blockchain.com, working across Retail, Wealth and Institutional in 26 markets. My title says marketing, but a large part of my day is very similar to this role. I monitor activity every day, investigate anything that does not add up, work inside regulated processes with Compliance and Legal, and fix the workflows and tools behind it. My strength has always been problem solving.

On daily monitoring, I check spend and performance across 121 live campaigns in 26 markets every day. When a number looks wrong, I find out why and act on it. Through that daily review and 128 structured tests, I moved about $21k away from 26 underperforming campaigns, and on UK campaigns that cut cost per install by 21.5% while installs rose 30.2%. Monitoring customer activity at Alpaca needs the same habit, checking the data every day and investigating anything unusual straight away.

On regulation, I supported the rollout of the UK FinProm approval process with Compliance, reviewing messaging and risk disclosures across all our retail crypto products in the UK, US and EU. When I led the launch of our loans product in Malaysia, I researched the local crypto regulations and helped set up a new compliance review process with Legal. We converted 4 high net worth clients within the first month. When MiCAR came in, a major exchange started losing access to its European clients. I spotted the opportunity, built an outreach list of 80 crypto publishers with AI, and it brought in 3 major clients. Crypto regulation changes fast, and I am used to working inside the rules and adapting when they change, which is what supporting your onboarding and AML program needs.

On workflows and tools, I automate work I see repeated. I built automated reporting with Claude Code and MCP connectors, then worked with Data Engineering and Security to ship it to production as a company-wide dashboard. It saves the team about 10 hours a month. I also built our first in-house AI UGC workflow in 2 weeks. It cut production time by 75%, lifted click-through rate from 0.4% to 1.15%, cut cost per install from $25 to $6, and drove 600+ installs in the first 7 days after I recreated the creative for our rebranded yield product. I then built a skill so other team members could run it without me. Your role asks for someone who proactively improves workflows, policies and tools, and that is how I already work.

On finding the root cause, users were dropping off our perps product and I wanted to understand why. I led research with active, inactive and churned users and found that many did not understand how perps work or what the risks are. I explained the findings to Product, and we reworked the in-app explainer and help page. Retention grew by 12%. Investigating a problem, finding its cause and explaining it clearly to the people who can fix it is the same work as handling exceptions and communicating with partners.

I want to join Alpaca because your operations team sits behind other companies' investing apps in 40 countries, so every check you make protects someone else's customers too. I like work where accuracy matters that much. I also noticed that you describe Alpaca as agent-first brokerage infrastructure, so I expect AI to be encouraged in everyday work. That suits me.

I can share references from product marketing, compliance and legal colleagues at Blockchain.com.

Kind regards,

Jessie Chan
