Dear Capital on Tap hiring team,

I am applying for the Commercial Strategy Manager role in the Growth team.

I am a growth marketer at Blockchain.com, working across Retail, Wealth and Institutional in 26 markets. Most of my work is turning commercial questions into analysis, recommending what to do, and then making it happen myself.

On commercial decisions, I ran 128 structured tests across 26 markets and found 26 campaigns that were not earning their budget. I moved around $21k into the 5 campaign groups that worked. On UK campaigns that cut cost per install by 21.5% while installs rose 30.2%. Before that, at Malaberg, I managed a £50k+ monthly budget at 120% ROAS.

On new channels and markets, I expanded our paid search from 2 to 26 markets. Daily installs grew about 3x, from 187 to 562, while cost per install stayed flat. I also took our loans product into Malaysia as a new market, from choosing the channels to setting up a compliance review with Legal. It closed 4 high net worth clients within 1 month of launch. And when new EU digital asset regulation came in, a major exchange lost access to its European clients. I turned that into a new outreach channel, which brought in 3 major clients.

On getting customers to use more of the product, users were churning from our perps product. I led research with active, inactive and churned users and found that many did not understand it. We changed the in-app explainer, and retention grew by 12%. Trading volume grew 5x in two months.

On data, I work in Excel and SQL every day. I also automated our daily performance reporting with Claude Code and led its launch as a company-wide dashboard, which saves the team about 10 hours a month.

I want to join Capital on Tap because you expect the same person to find the problem, do the analysis and solve it. My strength has always been problem solving. At Blockchain.com, I spotted competitors running AI-generated UGC ads and saw the downside of our own workflow, which relied on creators. I built our in-house AI UGC workflow in 2 weeks, and it cut production time by 75%. I also noticed that you are hiring someone to bring AI into how your teams work, so I expect AI to be encouraged in everyday work. That suits me. I already use Claude Code to automate my reporting and analysis, and I would use it here to get from a question to a tested recommendation faster.

I can share references from product marketing, compliance and legal colleagues at Blockchain.com.

Kind regards,

Jessie Chan
