Dear Chase UK hiring team,

I am a growth marketer at Blockchain.com, and my strength is turning data into experiments that move conversion. I find where customers drop off, test a fix quickly, and use AI to scale what works. That is what I would bring to your Conversion Rate Optimisation Manager role.

I run experiments at pace across app store pages and campaigns, which is the core of this role. Our Apple Search Ads ran in only 2 countries, and the goal was to scale them without raising costs. I built 20+ Custom Product Pages for 12 markets, each aligned to its campaign, and ran 128 structured experiments on keywords, bids, creative and pages. I scaled the 5 groups that worked and cut the 26 that did not. Daily installs grew about 4x while cost per install stayed flat, and on UK campaigns cost per install fell by 21.5% while installs rose 30.2%. I also refreshed our App Store and Google Play listings across 20 storefronts.

I build hypotheses from qualitative and quantitative research before I test anything. Users were leaving our perps product, and I wanted to understand why. I ran research with active, inactive and churned users and found that many did not understand how perps work or what the risks are. I worked with Product to make the explainer always visible and rework the help page, and retention grew by 12%. At Malaberg, I used funnel analysis and session recordings in Microsoft Clarity to rebuild our landing pages, and daily conversions grew from 10 to 50+.

I use AI to test more ideas, faster. Our ads relied on real creators, who were expensive and ran out quickly. I built our first in-house AI UGC workflow in 2 weeks, which cut production time by 75% and lifted click-through rate from 0.4% to 1.15%. When we rebranded our yield product, I used it to recreate the creative, and it drove 600+ installs in the first 7 days. I then built a skill so the team could run it without me. I also built automated reporting with Claude Code and MCP connectors, so the team can monitor performance every day without manual work.

Chase UK is an app-first bank, so the app store page and the website are often the first place a customer meets you. Small changes there decide whether someone opens an account, and I would love to own that experiment roadmap. I also know how to test quickly in a regulated industry, having supported the rollout of the UK FinProm approval process with Compliance.

Kind regards,

Jessie Chan
