Dear eToro hiring team,

I am applying for the marketing role in your UK team.

I am a growth marketer at Blockchain.com, working across Retail, Wealth and Institutional in 26 markets. I use AI to solve marketing problems, whether improving current workflows or opening new acquisition funnels.

On AI and creative, our ads relied on real creators. Their videos were expensive, and once they ran out we had nothing new to test. On TikTok an ad only lasts about two weeks. I spotted competitors running AI-generated UGC ads and saw the downside of relying on creators, so I proposed we build our own. I built the workflow in 2 weeks. It cut production time by 75%, lifted click-through rate from 0.4% to 1.15%, and drove 600+ installs in the first 7 days of our yield product relaunch. The videos now run as paid social ads across TikTok, Meta, Google and LinkedIn. What I learnt is that a project that cannot be replicated at scale is not a good project. The first version relied on me to write the prompts, so I built a skill that generates them and handed the workflow to other team members to run.

On paid search and the app store, I scaled our Apple Search Ads from 2 to 26 countries. Daily installs grew about 3x, from 187 to 562, while cost per install stayed flat. I ran 128 structured tests to get there, and on UK campaigns that cut cost per install by 21.5% while installs rose 30.2%. I also worked on app store optimisation, refreshing our listings across 20 storefronts and building 20+ Custom Product Pages for 12 markets, so the people who found us organically saw the right message for their market.

On copy and CRM, I localised our CRM emails in Iterable into 24 languages, which lifted open rates by 10%. At Malaberg, I redesigned our landing and promotional pages in Figma and Photoshop, and daily conversions went from 10 to 50+.

I want to join eToro because this is a role where you have to get your hands dirty: writing the briefs, setting up the campaigns and tracking the results. I think you only really know why something is working, or why it is not, when you are involved in the whole process. I like that, because it lets me make sure every piece of material is at the quality I want. I also like that AI is part of how your marketing team works every day. That suits me.

I can share references from product marketing, compliance and legal colleagues at Blockchain.com.

Kind regards,

Jessie Chan
